NIN Validation API Documentation

Base URL
https://premiere.vuvaa.com/demo/NIN_Validation_LIVE

Overview

This API provides endpoints for NIN (National Identity Number) validation services, user management, wallet operations, and transaction history.

Authentication

All endpoints use encrypted payload authentication. Request bodies should contain a payload field with encrypted data.

Encryption Details

- **Algorithm:** AES-256-CBC
- **Demo Encryption Key:** FD!-F=15B46BAD21
- **IV:** 0123456789012345

N/B

Authentication

- **Requirement:** Every endpoint must be accessed with a valid **Bearer token** (<accessToken>).
- **Exceptions:**
  - /create_user
  - /login
    These endpoints do **not** require authentication.
- **Getting an Access Token:**
  - You can obtain a valid **accessToken** by calling the **/login** endpoint with your credentials.
  - Use this token in the Authorization header for all protected endpoints:

```
Authorization: Bearer <accessToken>
```

All sensitive request data must be encrypted using AES-256-CBC encryption and Base64 encoded before transmission. Similarly, encrypted response payloads must be Base64 decoded and decrypted using the same key.
NOTE: The Bearer token has an expiration period of 3hrs

Endpoints

1. Create User

Creates a new user account in the system.

```
Endpoint: POST /create_user
```

Request Body:

Payload:

```
{
    "payload":
"u0N8ngdpClK5d5hrcbC4OH6iqjOahNmbtYRv+SwPR2paSBuKbbSOAcejWKUk0QG+1OxXB
BU2Wtcsi1SKErDDkQlpSBOFg2zB5/S6vPnNNtIQDg60rZjuF/ohuP9noRbOZaSwEWgdlDE

8czzK1CzyLAOpvfPU8siTDCpVBraz"
}
```

Decrypted Payload Structure:

```
{
    "email": "test***@mail.com",
    "password": "Password",
    "firstname": "lorem",
    "lastname": "ipsum",
    "username": "loremipsum",
    "dob": "1997-10-12",
    "gender": "Male",
    "address": "102 crescent",
    "state": "FCT",
    "phone": "0806558***6",
    "account_level": "2",
    "enterprise_id": "Fgwzi7hZtWU",
    "ip_addresses": [
```

```
        "127.0.0.1",
        "::1"
    ]
}
```

Parameters:

Field	Type	Required	Description
email	string	Yes	User's email address
password	string	Yes	Account password
firstname	string	Yes	User's first name
lastname	string	Yes	User's last name
username	string	Yes	Unique username
dob	string	Yes	Date of birth (DD-MM-YYYY)
gender	string	Yes	Gender (Male/Female)
address	string	Yes	Physical address
state	string	Yes	State of residence
phone	string	Yes	Phone number
account_level	string	Yes	Account level (1-5)
enterprise_id	string	Yes	Unique enterprise identifier
ip_addresses	array	Yes	Array of whitelisted IP addresses (IPv4 and/or IPv6)
ip_val_flag	Integer	Yes	IP Validator 0:Do not enforce IPValidation 1:Enforce IPValidation

Success Response:

```
{
    "payload":
"A81sCyRZbajQ8aHjOJ0jobMEFUMueuwWLK/wjIzY2E0S0ebIxZ2prgZ6URyIc6TCESWiC
YHR+R6jkPaZswN9xw=="
}
```

Decrypted Success Response:

```
{
    "status": 200,
    "message": "Account created successfully."
}
```

---

2. Authentication (Login)

Creates a new user account in the system.

```
Endpoint: POST /login
```

Request Body:

Payload:

```
{
     "payload":"4yJUy2xRQ9bI39cg3fSGq3Oz0JOTGWiRP0QQVtex+J5sysylCeVIlh

        }

    }

}
```

3. Get Wallet Details

Retrieves wallet information for a user including validation units balance.

Endpoint: POST **/get_wallet_details**

Request Body:

```
{

    "payload": "FFGYvcn1uHDKlXZ1yxpUSIJ5HaO0wxx9SGM7ZEn2PW8="

}
```

Decrypted Payload Structure:

```
{
    "username": "dorisVal"
}
```

Success Response:

```
{
    "payload": "TWRGiZ8HsCewJWNUXYSRTrbP1DVt+lN6VQiEbhxyeFF57M..."
}
```

Decrypted Response:

```
{
    "status": "00",
    "message": "Successful",
    "data": [
        {
            "username": "dorisVal",
            "validation_units": 2
        }
    ]
}
```

---

4. Transaction History

Retrieves the transaction history for a user account.

Endpoint: POST **/transaction_history**

Request Body:

```
{
    "payload": "FFGYvcn1uHDKlXZ1yxpUSIClJciTDF/q4q64rc/chZM="
}
```

Decrypted Payload Structure:

```
{
    "username": "dorisVal"
}
```

Success Response:

```
{
    "payload":

        }
    ]
}
```

Transaction Status Codes:

Code	Description
00	Successful
51	Insufficient funds
99	Incomplete

---

5. Verify NIN [FINANCIAL INSTITUTIONS AND GOVERNMENT AGENCIES.]

Validates a National Identity Number and retrieves associated personal information.

Raw NIN Verification allows identity confirmation using only the individual's National Identification Number (NIN). This method is **being phased out by NIMC** and is currently restricted to **financial institutions and government agencies.**

Endpoint: `POST` **`/verify_nin`**

Sample NIN (DEMO env): `'98765432109','09876543210','45612378903'`

Request Body:

```
{
    "payload":
"FFGYvcn1uHDKlXZ1yxpUSLRLTjZA3+xPaB9v/knQp+cFbp5FveV3Pjsy9tJTmmNo"
}
```

Decrypted Payload Structure:

```
{
```

```
    "username": "dorisVal",
    "nin": "74756011111",
    “reason”: “nyscCheck”,
    “reference_id: “{{Generate Unique Reference ID}}”
}
```

Success Response:

```
{
    "payload":

        "validation_units_before": 2399,
        "validation_units_after": 2398
    }
}
```

Response Fields:

Field	Type	Description
transaction_id	string	Unique transaction identifier
reference_id	string	Unique passed reference identifier
requestID	string	Unique returned NIMC ID
fname	string	First name
mname	string	Middle name
lname	string	Last name
dob	string	Date of birth (DD-MM-YYYY)
phone	string	Phone number
stateOfOrigin	string	State of origin
lgaOfOrigin	string	Local Government Area of origin
town	string	Town of origin
residenceAdress	string	Current residential address

residenceTown	string	Current residential town
residenceState	string	Current residential state
residenceLga	string	Current residential LGA
image	string	Base64 encoded photograph
validation_units_before	integer	Validation units before transaction
validation_units_after	integer	Validation units after transaction

---

6. In person Verification [ALL ORGANIZATIONS/BUSINESS TYPES]

It allows businesses to confirm a customer's identity using their NIN and a selfie image, which also serves as consent. This method is ideal for service environments such as bank branches or offices, where organizations can provide devices to facilitate secure, user-driven verification.
Recommended for all business types, agencies or organizations

```
Endpoint: POST /in_person_verification
```

Request Body:

```
{
"payload":
"O45sN5DLk6CoU144+VDWKN9FfDzmuwn39fBMsB6okUK9z2CxvkS11EHFZcz6Hd46ha893

XKFdEH6h/DdQTOeqnaHhuVk5kB5XVxCt/9Hv1SPpXJICeOc1IA2reRLuUmH/7CE8BDVg==
"
}
```

Decrypted Payload Structure:

```
{
    "nin": "1347***058",
    "selfieImage": "/9j/4AAQSkZJRgABAQAAAQABAAD==",
    "username": "loremipsum",
    "reference_id": "REF10*****5",
    "reason": "nyscCheck"
}
```

Success Response:

```
{
    "payload": "TWRGiZ8HsCewJWNUXYSRTrbP1DVt+lN6VQiEbhxyeFF57M..."
}
```

Decrypted Response:

```
{
    "status": 200,
    "message": "Success.",
    "data": {
        "transaction_id": "768790591648006",
        “reference_id”: ”ref2342134123***”,
        “requestID”: ”SKS123KADF”,
        "fname": "LUCY",
        "mname": "AMALACHUKWU",
        "lname": "OKOYEAGU",
        "dob": "11-11-1995",
        "phone": "08181986163",
        "stateOfOrigin": "Anambra",
        "lgaOfOrigin": "Idemili North",
        "town": "OGIDI",
        "residenceAdress": "14A NEW ROAD",
        "residenceTown": "SATALLITE",
        "residenceState": "Lagos",
        "residenceLga": "Amuwo-Odofin",
        "image": "/9j/4AAQSkZJRgABAgAAAQABAAD...",
        "validation_units_before": 2399,
        "validation_units_after": 2398
    }
}
```

Response Fields:

Field	Type	Description
transaction_id	string	Unique transaction identifier
reference_id	string	Unique passed reference identifier
requestID	string	Unique returned NIMC ID
fname	string	First name
mname	string	Middle name
lname	string	Last name
dob	string	Date of birth (DD-MM-YYYY)
phone	string	Phone number
stateOfOrigin	string	State of origin
lgaOfOrigin	string	Local Government Area of origin
town	string	Town of origin
residenceAdress	string	Current residential address
residenceTown	string	Current residential town
residenceState	string	Current residential state
residenceLga	string	Current residential LGA
image	string	Base64 encoded photograph
validation_units_before	integer	Validation units before transaction
validation_units_after	integer	Validation units after transaction

7. Share Code [ALL ORGANIZATIONS/BUSINESS TYPES]

A Share Code is a 6-character alphanumeric code **generated by a user via the NINAuth mobile app**. It enables secure, one-time identity verification when the user is not physically present.

Endpoint: `POST /share_code`

Request Body:

```
{
    "payload":
"FFGYvcn1uHDKlXZ1yxpUSLRLTjZA3+xPaB9v/knQp+cFbp5FveV3Pjsy9tJTmmNo"
}
```

Decrypted Payload Structure:

```
{
    "username": "loremipsum",
    "shareCode": "BBA76",
    “reason”: “{{Input reason}}”,
    “reference_id: “{{Generate Unique Reference ID}}”
}
```

Success Response:

```
{
    "payload":
"A81sCyRZbajQ8aHjOJ0joTeG6xTCZyQzOgJLncKdKWwIfM5e9IS3s4+JW8FUlY9q/3bc0

}
```

Decrypted Success Response:

```
{
    "status": 200,
    "message": "Success.",
    "data": {
        "transaction_id": "768790591648006",
        “reference_id”:”ref2342134123***”,
        “requestID”:”SKS123KADF”,
        "fname": "LUCY",
```

```
        "mname": "AMALACHUKWU",
        "lname": "OKOYEAGU",
        "dob": "11-11-1995",
        "phone": "08181986163",
        "stateOfOrigin": "Anambra",
        "lgaOfOrigin": "Idemili North",
        "town": "OGIDI",
        "residenceAdress": "14A NEW ROAD",
        "residenceTown": "SATALLITE",
        "residenceState": "Lagos",
        "residenceLga": "Amuwo-Odofin",
        "image": "/9j/4AAQSkZJRgABAgAAAQABAAD...",
        "validation_units_before": 2399,
        "validation_units_after": 2398
    }
}
```

Response Fields:

Field	Type	Description
transaction_id	string	Unique transaction identifier
reference_id	string	Unique passed reference identifier
requestID	string	Unique returned NIMC ID
fname	string	First name
mname	string	Middle name
lname	string	Last name
dob	string	Date of birth (DD-MM-YYYY)
phone	string	Phone number
stateOfOrigin	string	State of origin
lgaOfOrigin	string	Local Government Area of origin

town	string	Town of origin
residenceAdress	string	Current residential address
residenceTown	string	Current residential town
residenceState	string	Current residential state
residenceLga	string	Current residential LGA
image	string	Base64 encoded photograph
validation_units_before	integer	Validation units before transaction
validation_units_after	integer	Validation units after transaction

7. GET NIMC Reasons

```
Endpoint: POST /getReasons
```

Request Body:

Payload:

```
{
     "payload":"4yJUy2xRQ9bI39cg3fSGq3Oz0JOTGWiRP0QQVtex+J5sysylCeVIlh

8. Requery

Re-query NIN records using `reference_id`

Endpoint: POST **/requery**

Request Body:

```
{
    "payload":
"FFGYvcn1uHDKlXZ1yxsdgsdgjyjtnnxfyhdrepUSIClJciTDF/q4q64rc/chZM="
}
```

Decrypted Payload Structure:

```
{
    "username": "loremipsum",
```

```
    “reference_id”: “ref24234***adfcadf”
}
```

Success Response:

```
{
    "payload":
"TWRGiZ8HsCewJWNUXYSRTrbP1DVt+lN6sdfgsdbdfbedthedbsdfbedgbdbrthdbtrghr
tbdfnhfjykrjhfdfgjhfgndhdfVQiEbhxyeFF57M..."
}
```

Decrypted Response:

```
{
    "status": 200,
    "message": "Record retrieved successfully",
    "data": {
        "requestID": "JXIADA89B1B1",
        "birth_country": null,
        "birth_lga": null,
        "birth_state": null,

        "in_person_verification": "1",
        "session_complete": "1",
        "reference_id": "REF10749036"
    }
}
```

Response Codes

HTTP Status Codes

Code	Description
200	Success
400	Bad Request
401	Unauthorized
500	Internal Server Error

Application Status Codes

Code	Description
00	Successful
51	Insufficient funds in vuvaa wallet
99	Incomplete transaction

Error Handling

Error Response Format:

```
{
    "status": "error_code",
    "message": "Error description",
    "payment_feedback": "Detailed error message"
}
```

Common Errors:

- Insufficient validation units
- Invalid NIN format
- User not found
- Authentication failure

Headers

All requests should include:

Content-Type: application/json

Access-Control-Allow-Origin: *

Access-Control-Allow-Methods: PUT, GET, POST

Notes

1. **Payload Encryption**: All sensitive data is transmitted using AES-256-CBC encryption with Base64 encoding.
    - **Encryption Algorithm:** AES-256-CBC
    - **Demo Key:** FD!-F=15B46BAD21
    - Encrypt your JSON payload, then Base64 encode it before sending
2. **Validation Units**: Each NIN validation consumes 1 validation unit from the user's wallet.
3. **Date Format**: All dates use YYYY-MM-DD format.
4. **Image Data**: Profile images are returned as Base64 encoded JPEG strings.

Encryption Example

Encryption Process (Pseudo-code)

1. Prepare your JSON data

```
data = {"username": "dorisVal", "nin": "74756011111"}
```

2. Convert to JSON string

```
jsonString = JSON.stringify(data)
```

3. Encrypt using AES-256-CBC

```
encrypted = AES_encrypt(jsonString, key="FD!-F=15B46BAD21", algorithm="AES-256-CBC")
```

4. Encode to Base64

```
payload = base64_encode(encrypted)
```

5. Send in request body

```
{"payload": payload}
```

Decryption Process (Pseudo-code)

1. Receive encrypted response

```
response = {"payload": "TWRGiZ8HsCewJWNUXYSRTrbP1DVt+lN6..."}
```

2. Decode from Base64

```
encrypted = base64_decode(response.payload)
```

3. Decrypt using AES-256-CBC

```
decrypted = AES_decrypt(encrypted, key="FD!-F=15B46BAD21", algorithm="AES-256-CBC")
```

4. Parse JSON

```
data = JSON.parse(decrypted)
```
